

JOBSHEET PRAKTIKUM

Mata Kuliah: Pemrograman Web Lanjut

Pertemuan 8 – Implementasi Info List (View Page) di Filament

Capaian Pembelajaran

Setelah mengikuti praktikum ini, mahasiswa mampu:

1. Memahami konsep Info List pada Filament
2. Mengubah tampilan View Page dari form menjadi display informasi
3. Menggunakan TextEntry, ImageEntry, dan IconEntry
4. Menggunakan Badge, Color, Icon, dan Format Date
5. Mendesain halaman detail (show page) yang lebih profesional

Framework yang digunakan:

Filament

A. Latar Belakang

Pada pertemuan sebelumnya, kita telah membuat Wizard Form pada module Product.

Namun ketika tombol View diklik, halaman detail masih menampilkan form input (kurang tepat untuk tampilan informasi).

Solusinya adalah menggunakan Info List agar data ditampilkan dalam bentuk informasi (read-only display).

B. Konsep Info List

Info List digunakan untuk:

- Menampilkan data detail record
- Mengganti tampilan input menjadi display-only
- Membuat halaman View lebih profesional

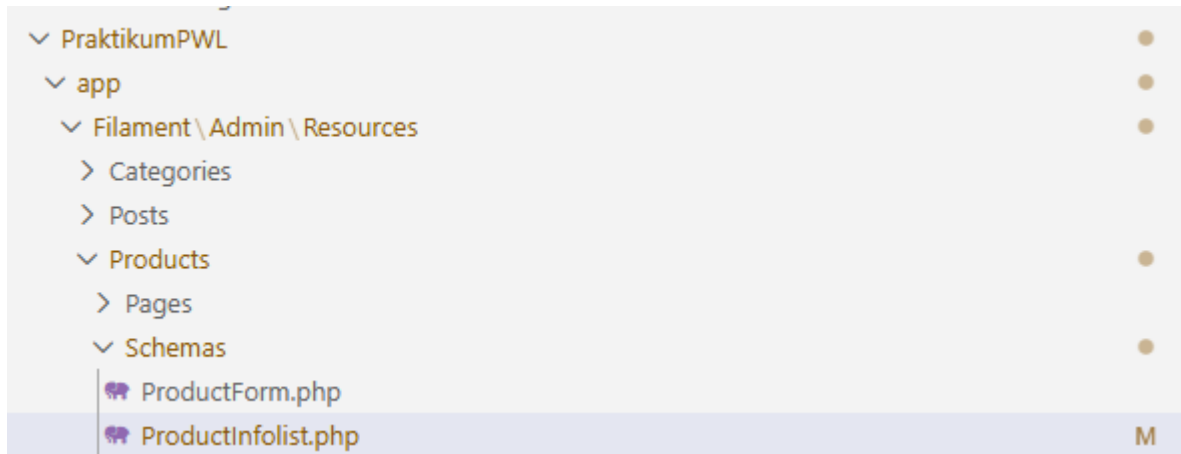

Komponen Info List mirip dengan:

Form	Table	Info List
TextInput	TextColumn	TextEntry
FileUpload	ImageColumn	ImageEntry
Checkbox	IconColumn	IconEntry

✦ C. Mengedit Product Info List

Buka file:

- ProductInfolist.php

✦ D. Membuat Section – Product Info

```
Section::make('Product Info')
->schema([
    TextEntry::make('name')
        ->label('Product Name')
        ->weight('bold')
        ->color('primary'),

    TextEntry::make('id')
        ->label('Product ID'),

    TextEntry::make('sku')
        ->label('Product SKU')
        ->badge()
        ->color('success'),

    TextEntry::make('description')
        ->label('Product Description'),
])
->columnSpanFull(),
```

PraktikumPWL > app > Filament > Admin > Resources > Products > Schemas > ProductInfolist.php > ...

```
1  <?php
2
3  namespace App\Filament\Admin\Resources\Products\Schemas;
4
5  use Filament\Schemas\Components\Section;
6  use Filament\Infolists\Components\TextEntry;
7  use Filament\Schemas\Schema;
8
9  class ProductInfolist
10 {
11     public static function configure(Schema $schema): Schema
12     {
13         return $schema
14             ->components([
15                 //
16                 Section::make('Product Info')
17                     ->description('')
18                     ->schema([
19                     TextEntry::make('name')
20                         ->label('Product Name')
21                         ->weight('bold')
22                         ->color('primary'),
23                     TextEntry::make('id')
24                         ->label('Product ID'),
25                     TextEntry::make('sku')
26                         ->label('Product SKU')
27                         ->badge()
28                         ->color('success'),
29                     TextEntry::make('description')
30                         ->label('Product Description')
31                 ])
32             ->columnSpanFull()
33         ]);
34     }
35 }
```

- ◆ Tampilan Section Product Info

📌 E. Section – Pricing & Stock

Section::make('Pricing & Stock')

```
->schema([
    TextEntry::make('price')
        ->label('Product Price')
        ->icon('heroicon-o-currency-dollar'),
```

```
    TextEntry::make('stock')
        ->label('Product Stock'),
```

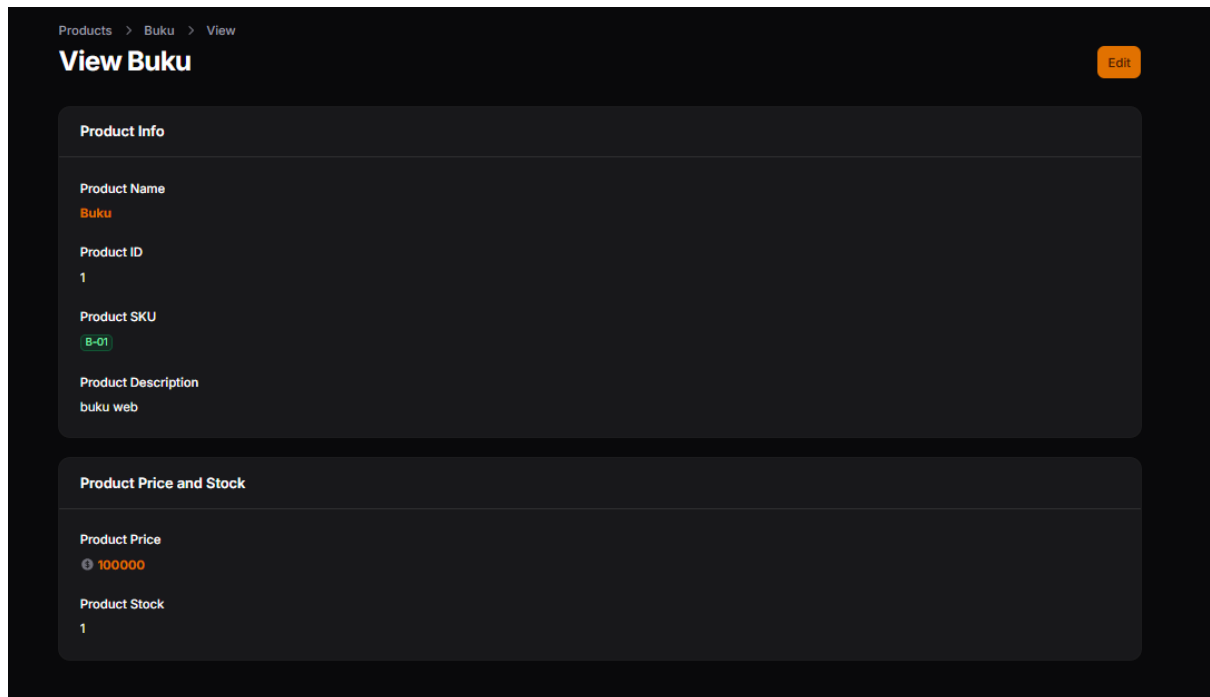

```
]),
```

PraktikumPWL > app > Filament > Admin > Resources > Products > Schemas > ProductInfolist.php > PHP Intelephense > ProductInfolist > configure

```
9  class ProductInfolist
    Windsurf: Refactor | Explain | Generate Function Comment | X
11  {
12      public static function configure(Schema $schema): Schema
13      {
14          return $schema
15              ->components([
16              //
17              > Section::make('Product Info') ...
32          ->columnSpanFull(),
33          Section::make('Product Price and Stock')
34              ->description('')
35              ->schema([
36                  TextEntry::make('price')
37                      ->label('Product Price')
38                      ->weight('bold')
39                      ->color('primary')
40                      ->icon('heroicon-s-currency-dollar'),
41                  TextEntry::make('stock')
42                      ->label('Product Stock'),
43              ])
44          ->columnSpanFull(0)
45      ]);
46  }
47  }
48  }
```

Hasil:

- Price memiliki icon dolar
- Stock ditampilkan dalam format teks

F. Section – Media & Status

◆ Menampilkan Gambar

```
ImageEntry::make('image')
->label('Product Image')
->disk('public'),
```

```

4
5 use Filament\Schemas\Components\Section;
6 use Filament\Infolists\Components\TextEntry;
7 use Filament\Infolists\Components\ImageEntry;
8 use Filament\Schemas\Schema;
9
10 class ProductInfolist
11 {
12     public static function configure(Schema $schema): Schema
13     {
14         return $schema
15             ->components([
16                 //
17                 Section::make('Product Info') ...
18                 ->columnSpanFull(),
19                 Section::make('Product Price and Stock') ...
20                 ->columnSpanFull(),
21                 Section::make('Image and Status')
22                 ->description('')
23                 ->schema([
24                     ImageEntry::make('image')
25                     ->label('Product Image')
26                     ->disk('public'),
27                     TextEntry::make('price')
28                     ->label('Product Price')
29                     ->weight('bold')
30                     ->color('primary'),
31                     TextEntry::make('stock')
32                     ->label('Product Stock')
33                     ->weight('bold')
34                     ->color('primary'),
35                 ])
36                 ->columnSpanFull(),
37             ]);
38     }

◆ Menampilkan Status Boolean

```
IconEntry::make('is_active')  
->label('Is Active')  
->boolean(),
```

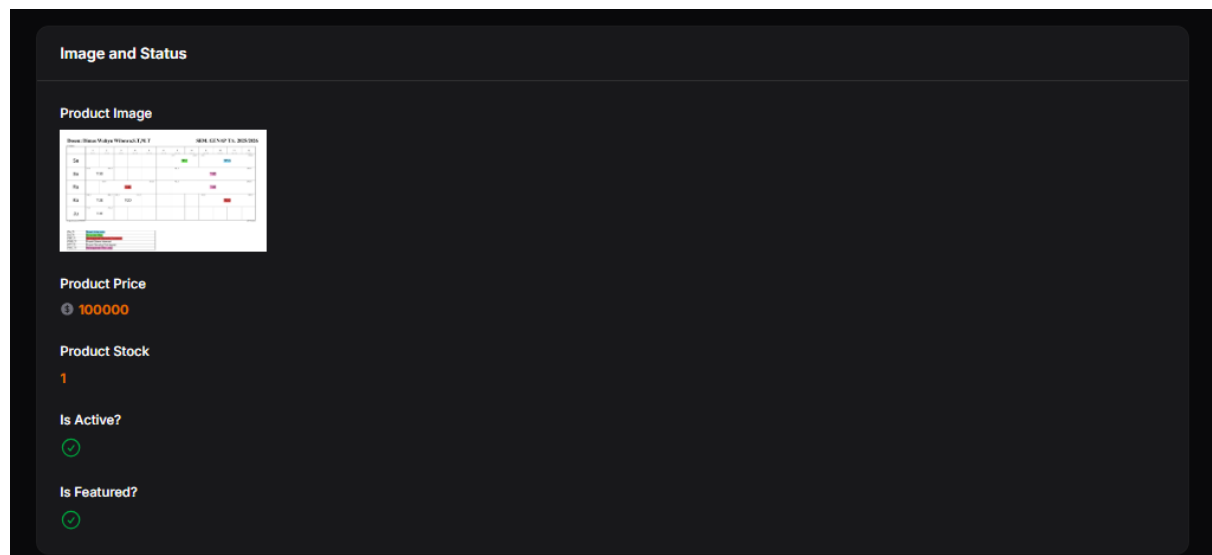

```
IconEntry::make('is_featured')  
->label('Is Featured')  
->boolean(),
```

PraktikumPWL > app > Filament > Admin > Resources > Products > Schemas > ProductInfolist.php > PHP Intelephense > ProductInfolist > configure

```
8 use Filament\Infolists\Components\IconEntry;  
9 use Filament\Schemas\Schema;  
10  
11 class ProductInfolist  
12 {  
13     public static function configure(Schema $schema): Schema  
14     {  
15         return $schema  
16             ->components([  
17                 //  
34 > Section::make('Product Info') ...  
35 > ->columnSpanFull(),  
36 > Section::make('Product Price and Stock') ...  
37 > ->columnSpanFull(),  
46 Section::make('Image and Status')  
47     ->description('')  
48     ->schema([  
49         ImageEntry::make('image')  
50         ->label('Product Image')  
51         ->disk('public'),  
52         TextEntry::make('price')  
53         ->label('Product Price')  
54         ->weight('bold')  
55         ->color('primary')  
56         ->icon('heroicon-s-currency-dollar'),  
57         TextEntry::make('stock')  
58         ->label('Product Stock')  
59         ->weight('bold')  
60         ->color('primary'),  
61         IconEntry::make('is_active')  
62         ->label('Is Active?')  
63         ->boolean(),  
64         IconEntry::make('is_featured')  
65         ->label('Is Featured?')  
66         ->boolean(),  
67     ])  
68     ->columnSpanFull(),  
69 ]);  
70 }  
71 }  
72 }
```

Jika true → icon check

Jika false → icon hilang

-
- ◆ Menampilkan Tanggal dengan Format

```
TextEntry::make('created_at')  
->label('Product Creation Date')  
->date('d M Y')  
->color('info'),
```

```
11 class ProductInfolist
    Windsurf: Refactor | Explain | Generate Function Comment | X
13 public static function configure(Schema $schema): Schema
14 {
15     return $schema
16     ->components([
17         //
18         Section::make('Product Info')
19         ->description('')
20         ->schema([
21             TextEntry::make('name')
22             ->label('Product Name')
23             ->weight('bold')
24             ->color('primary'),
25             TextEntry::make('id')
26             ->label('Product ID'),
27             TextEntry::make('sku')
28             ->label('Product SKU')
29             ->badge()
30             ->color('success'),
31             TextEntry::make('description')
32             ->label('Product Description'),
33             TextEntry::make('created_at')
34             ->label('Product Creation Date')
35             ->date('d M Y')
36             ->color('info'),
37         ])
38     ->columnSpanFull(),
39     > Section::make('Product Price and Stock') ...
50     ->columnSpanFull(),
51     > Section::make('Image and Status') ...
73     ->columnSpanFull(),
74     ]);
75 }
76 }
```

Filament Pan UI

Seamlessly integrate pan, the lightweight and privacy-focused PHP product analytics library, into your Filament admin panel with this powerful UI package.

The mockup shows a 'Pan Overview' section with a search bar and a table of analytics data. The table has columns for Id, Name, Impressions, Hovers, and Clicks. It lists three items: 'tab-summary', 'tab-details', and 'tab-old-related-products'.

Id	Name	Impressions	Hovers	Clicks
1	tab-summary	65,429	3,437 (5.3%)	2,902 (4.4%)
2	tab-details	12,031	1,023 (8.5%)	823 (6.8%)
	tab-old-related-products	11,246	1,522 (13.5%)	923 (8.2%)

At the bottom of the table, there is a 'Per page' dropdown menu set to 10.

✦ H. Ringkasan Komponen Info List

Komponen	Fungsi
TextEntry	Menampilkan teks
ImageEntry	Menampilkan gambar
IconEntry	Menampilkan icon boolean
badge()	Menampilkan dalam bentuk badge
color()	Memberi warna
weight()	Bold text
icon()	Menambahkan icon
date()	Format tanggal

✦ I. Perbandingan Sebelum & Sesudah

Sebelum	Sesudah
Tampilan form input	Tampilan display profesional
Field editable	Read-only
Kurang informatif	Lebih rapi & terstruktur

✦ J. Hasil yang Diharapkan

Mahasiswa berhasil:

- ✓ Mengubah View Page menjadi Info List
- ✓ Menggunakan TextEntry
- ✓ Menggunakan ImageEntry
- ✓ Menggunakan IconEntry untuk boolean

- ✓ Menggunakan badge, icon, color
 - ✓ Mengatur format tanggal
-

✦ K. Latihan Praktikum

1. Tambahkan badge untuk SKU dengan warna berbeda
 2. Tambahkan icon pada Stock
 3. Tambahkan format harga menjadi Rp dengan formatStateUsing()
 4. Buat minimal 2 product untuk pengujian
 5. Screenshot:
 - Section Product Info
 - Section Pricing & Stock
 - Section Media & Status
-

✦ L. Analisis & Diskusi

1. Mengapa View Page tidak cocok menggunakan form input?
 2. Apa perbedaan TextColumn dan TextEntry?
 3. Kapan kita menggunakan badge?
 4. Apa keuntungan menggunakan IconEntry untuk boolean?
-

✦ M. Kesimpulan

Pada pertemuan ini mahasiswa telah mempelajari:

- Konsep Info List
- Mengubah View Page menjadi display data
- Menampilkan image & boolean icon
- Formatting data (color, badge, date)
